Who we are

referee
real value of energy efficiency

REFEREE TOOL – Presentation leaflet

REFEREE is a user-friendly tool that helps you measure and visualize the multiple benefits of energy efficiency.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 101000136.

An easy-to-use online decision-support tool at your disposal

Adapted to different target audiences

Providing reliable information on the benefits of energy efficiency

What is Referee?

Referee is an online decision-support tool for energy efficiency measures. It will quantify the multiple benefits of energy efficiency, e.g. in terms of productivity, socioeconomic development, wellbeing, environment and climate.

How does it work?

REFEREE builds on E3ME, a macro-econometric model designed to address national and global economic and economy-environment policy challenges. Newly built technology diffusion models will assess the deployment of technologies in response to policy interventions in three sectors: road transport, housing and industrial demand for heat.

For whom?

The tool will be accessible to everyone: no specific software or modelling skills are required. Whether you work at local, regional or national level, energy or non-energy fields, you will be able to see the multiple benefits of energy efficiency.

You work in local government. You would like to take action to promote **smart energy management** for heating in the residential sector.

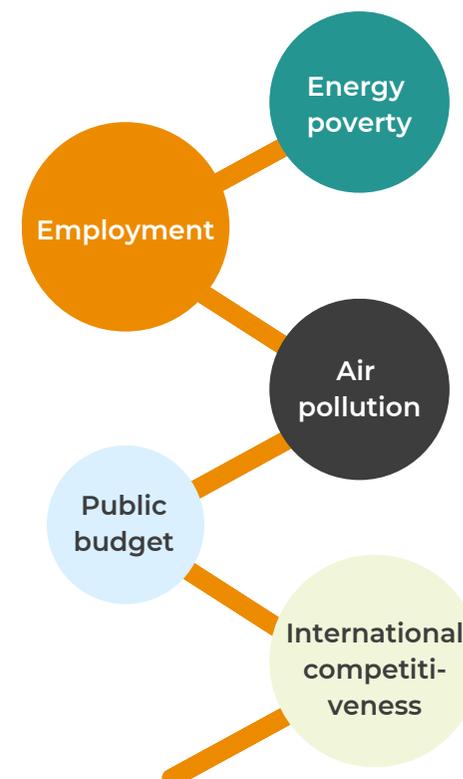

You are a national civil servant. Your ministry is working on a law to **phase out internal combustion engine vehicles** from 2030.

You work in an NGO. You are advocating for the introduction of a **coal tax** for industrial heating in the EU.

You can use the Referee tool to assess the multiple benefits of energy efficiency measures, in terms of:
